*"A New Study of Crown and Bridge
Prosthodontics for Elderly Patients"*

5.

Elderly people seek the services of a dentist for the same reasons given by younger individuals. They are just as interested in oral cosmetics and masticatory efficiency as their juniors. However, the dentist who approaches the problem from a biologic point of view knows that the teeth, their supporting tissues and the total oral environment experience aging changes. Consequently, the diagnosis, treatment plan, prognosis, patient management and practice administration must be changed accordingly. The patient, and not the technician, determines the entire procedure, and the success of the treatment depends on the patient's response to it, rather than on the technician's skill. Skill that is founded on knowledge is essential to successful prosthodontics in geriatric dentistry. The presentation will be fully illustrated with slides of clinical cases to demonstrate the biologic aspects of crown and fixed bridge gerodontology.

3:00- 4:30 R. Sheldon Stein, D.M.D.

"Appraisal of Current Occlusal Concepts"

Dr. Stein is a dynamic clinician, teacher, essayist, author and researcher. His appraisal of current occlusal concepts is based on many years of study and observation of all available techniques.

SUNDAY MORNING
